

Gate 6 – Closure Report Guidelines Outline of the Task and Deliverables

DSIA

Agenda

Key Objectives of Closure review Changes to Approach Key Steps and approximate end to end timeline Conduct of Review Report Preparation Structure and Format Q&A

Key objectives of the closure review

- 1. The final approved / approved re-baselined budget reconciles to the business case
- 2. The Sponsor is aware of any open issues that need to still be monitored or followed up
- Benefits have been clearly identified and captured and a strategy and ownership is in place to continue to harvest these
- 4. Any lessons that can be learned from the project as a whole to be captured for the future
- 5. The work will be completed in a collaborative manner with the project team
- 6. 7 Areas of focus will still be a guide to answering this question

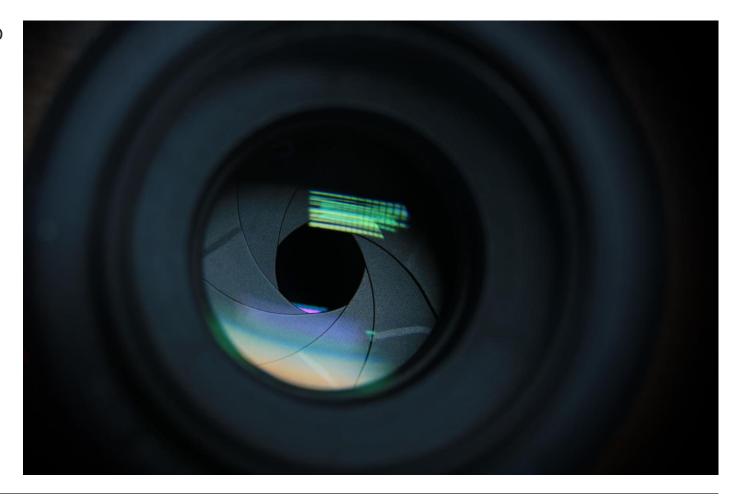

Has the investment made by government achieved the original objectives stated in the original approved business case

Purpose of the Closure review

The purpose of the Gate 6 Closure Review is to support the close-out of the delivery stage into operations and to assess the successful delivery of the purpose and benefits of the government's investment in the project. In addition, the review confirms that all relevant whole-of-government ICT policies, standards and priorities have been considered.

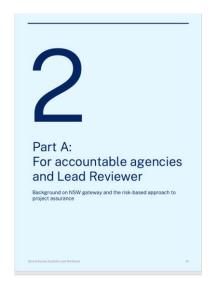

It is part of an overall Gateway Review Framework and measures progress and recommendations in terms of seven focus areas for ICT projects in NSW.

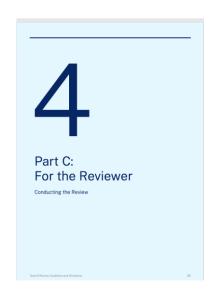

Guides for Each Stakeholder

Introduction

Changes to Approach

- The gateway review will take the best of the original PIR and the current INSW Benefits Realsiation gateway to form an enhanced review with clearer more achievable objectives as noted above
- The approach will require a longer planning phase to help ensure the client is ready for the gateway review
- The emphasis is on collaboration working together with the project team to confirm the key closure activities have been completed
- A focus on helping the sponsor understand that all material closure activities have been completed to a satisfactory level (one that would pass audit should it be selected for external review)
- Working with the project team to understand if there are issues that need to be monitored in BAU
- The template will be partially completed by the project team to help speed up the process and avoid any mismatch of historical facts – reducing the time scale and scope of fact check

Taking a collaborative approach working with the project team and sponsor to deliver the report

Gate 6 Overall Process

The expert Reviewer Team will work and collaborate with the agency to complete the Gate 6 Report.

1. Documentation Ready

Agency to have all relevant project docs available for lead reviewer

2. Alignment Session

Briefing session to ensure alignment with both expert reviewers and the agency

3. Gate 6 Template

Expert reviewer to collaborate with agency to fill in report template (up to 4 to 5 days)

4. Submit Final Draft

Lead Reviewer to submit Draft report for review/feedback/ fact check to agency

5. Final Report and Confidence Rating

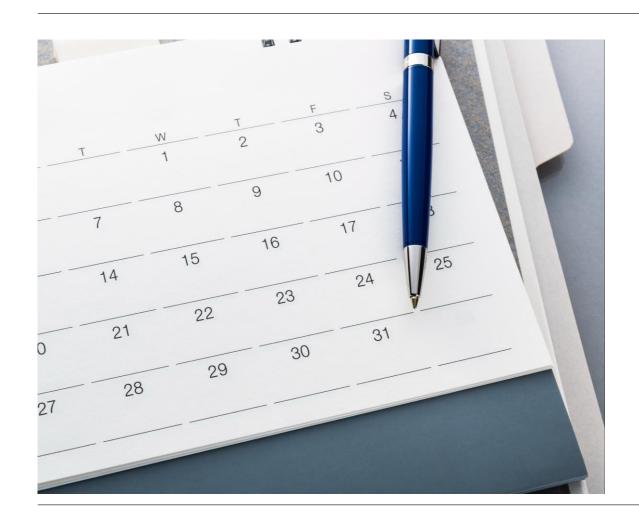

Review feedback and Submit Final report to Sponsor

6. Retros and recommendations

Feedback loop.
Close out plan to track/action and respond the recommendations

Key steps and Approximate Timeline

Step	Activity	
1	Three Months prior to go live / commencement date, the Accountable Agency checks readiness for the Gate 6 Review and contacts the Gateway Coordination Agency (GCA).	3 months prior
2	GCA Review Manager and Accountable Agency confirm the Review Dates.	₩
3	GCA Review Manager appoints an independent Reviewer Team to the review.	Ť
4	GCA Review Manager conducts a project briefing with the Accountable Agencies and Reviewer Team to gain a common understanding of the project's status, identify any supporting documentation required and provide guidance on how to complete the Gate 6 Report template.	1 month prior
5	The Accountable Agencies complete the Gate 6 Report template with input from the asset operator, delivery agency or other appropriate NSW government stakeholders.	•
6	The Accountable Agencies provide the Reviewer Team with the draft Gate 6 Report and supporting documentation.	
7	Reviewer Team meets with the Accountable Agencies to jointly review the draft Report, any supporting documentation and to seek any clarification required (including interviews if necessary).	Conduct
8	Reviewer Team determines the final content of the report, review rating and recommendations prior to submission of the final draft Report to the GCA Review Manager.	Ť
9	GCA Review Manager reviews the final draft Report, seeks any clarification required from the agencies or Lead Reviewer, clarifies recommendations, and finalises the Report.	Reporting
10	If deemed required, at GCA Review Manager's discretion, appoint a full independent review team and conduct a Deep Dive Review of the project.	\downarrow
11	Post Review survey sent out to Accountable Agency, Reviewer Team and GCA Review Manager.	
12	Close-out Plan issued and managed by DCS ICT Assurance	Close

Conduct of the review

Planning – Up to 3 months Prior to review

- Giving a longer lead time allows the agency to make sure it has had the opportunity to prepare all the necessary documentation and to check
- The reduces time lost in the review where documents are not ready and allows the Sponsor and PD to prepare before staff leave the project
- The focus is on the project's purpose, functionality, benefits, residual risks from delivery, transition to operation and lessons learnt. (Approach to ongoing compliance with Cyber, AI and Privacy requirements as these present ongoing risks in BAU)
- The Report content is to be initially jointly drafted by the project team and (project director and reviewed by the sponsor) delivery agency and asset owner/operator agency.
- The drafting is led by the project director with oversight by the sponsor most appropriate agency and must be completed within three weeks of the Gate 6 project briefing conducted with Digital Assurance NSW and the Lead Reviewer.

Review Fieldwork & Reporting

Digital Assurance NSW will appoint a Lead Reviewer and a review team member, where appropriate, to assess the draft Report and oversee the completion of the Gate 6 Report, including the Report's recommendations and rating.

Digital Assurance NSW and the Review team will participate in an alignment session (project briefing), which the agency will arrange along with any necessary further evidence (documentation), site tour or interviews required by the review team.

The review will be conducted with the project team working to refine the report and validate all the contents – not a stand back a interview process as other gates are currently run

Emphasis on answering the common questions on closure and identifying any issues that need to be addressed

While Recommendations can be suggested by the agency, it is the Reviewer Team that will determine both the final draft Report content, Review Rating, and final Recommendations.

Schedule Dates highlighted in red are when sponsor attendance is mandatory	Date
Project documents, made available to Reviewers by agency this will include the draft Gate 6 report template completed by the project team – (This is established and agreed 2 months prior to review)_	3 Weeks Before the Kick off
Planning Meeting (1-2 hours) review of the draft report and discuss logistics to complete the review Report review and Interviews	Two Weeks Before field work week Field Work Week
Publish Draft Report for Project team to complete final Fact Check	End of field work week
Project Team fact check the draft report and mark up comments	1 Week post field work
The Reviewers review draft report fact check comments and prepare feedback for a meeting with Sponsor	2 Days elapsed to review
Sponsor Debrief on Review Findings and Recommendations (1 hour)	TBD within 2 weeks of end field work
Publish Final Report	

Gate 6 Review Report: Closure Review

Project Name

April 2024

Report Structure and Format

The Gate 6 Report is in five parts:

Project Context – a summary of the delivery outcomes of the project to time, cost, scope and benefits – the investment by government

Project Handover – a summary of the status of the handover of the project from delivery into operations

Lessons Learnt – the agency's reflection on actions taken that impacted outcomes (good & bad)

Recommendations – actions the agency could take to improve any existing issues or for the future.

Status of BAU risk compliance approach over AI, Cyber and Privacy

Overall Confidence Rating against the business case

The Reviewer Team will assign the project an overall confidence rating and also provide recommendations rating (critical, essential or suggested)

High	Project has successfully delivered against the business base, purpose, outcomes and benefits against its agreed objectives, to time, cost and quality. Lessons learned have been considered, and anticipated benefits are being delivered and/or on track to being delivered; and There are no outstanding issues that appear to threaten benefits realisation and/or plans for ongoing improvements in value, service enhancements and performance.
Medium-High	Project has delivered most outcomes against its agreed objectives, to time, cost and quality. • Lessons learned have been considered, and anticipated benefits are being delivered and/or on track to being delivered; and • There are no major outstanding issues that appear to threaten benefits realisation and/or plans for ongoing improvements in value, service enhancements and performance.
Medium	Project has delivered outcomes against its agreed objectives, to time, cost and quality; • Lessons learned have not been considered in their entirety, and/or there are risks that may threaten plans for ongoing improvements in value, service enhancements and performance; or • The benefit realisation plan of the anticipated benefits is not completed, the outstanding issues appear to be resolvable at this stage, if addressed promptly.
Medium-Low	Project has delivered most outcomes against its agreed objectives, to time, cost and quality; • Lessons learned have not been considered in their entirety, and/or there are major risks/issues that may threaten plans for ongoing improvements in value, service enhancements and performance; or • Major risks and/or issues exist that threaten the realisation of anticipated benefits which, at this stage, do not appear to be manageable or resolvable.
Low	Project has not delivered most of the outcomes against its agreed objectives, or had not delivered to time, cost and quality; • Lessons learned have not been considered in their entirety, and there are major risks/issues that threaten plans for ongoing improvements in value, service enhancements and performance; or • Major risks and/or issues exist that threaten the realisation of anticipated benefits which, at this stage, do not appear to be manageable or resolvable

Final Comments & Thoughts

The new Gate 6 Closure review will help provide a more relevant assessment of projects and will give the government a clearer view of investments made in ICT

The approach will aim to assess the relative maturity of agencies to undertake large scale ICT project and may help manage this risk into the future

Ongoing risks that are emerging with BAU systems and platforms can also be identified and tracked

Sponsors will have a clearer view of the their current stat and obligations as this has been a grey area

Wider benefits can be gained from this exercise over time that will help support the wider implementation of state digital assets

Can we do better
